

**Office of Regulatory Staff
New Nuclear Development Update Report
V.C. Summer Units 2 & 3**

During the week of March 5, 2018, Office of Regulatory Staff – New Nuclear Development personnel (NND Personnel) worked at the VC Summer site on Monday.

On Monday March 5, NND Personnel attended the Plan of the Day meeting which focused on safety, SCE&G security and demobilization/abandonment of the site. The following activities were discussed:

- Saulsbury Industries is fully staffed on site.
- Concrete Batch Plant constituent removal will continue. The nitrogen storage tanks have been removed from the site.
- Demobilization of large storage containers has begun.
- Silt fencing and other storm water work have been completed on site.
- Carpenters are working to remove scaffolding in transformer areas.
- Fairfield County auditors are scheduled to return to the site. The auditors will be working in the Nuclear Island areas.

After the meeting, NND Personnel met with the SCE&G Abandonment Manager. The SCE&G Abandonment Manager stated that Santee Cooper and Westinghouse will be on site looking at warehouses and equipment installed in Unit 2 (including Containment). They will also tour the Blythewood and Metro off site warehouses. Santee Cooper continues to review the requirements of the equipment sale to Southern Nuclear (equipment has been previously identified and documented in the Southern Nuclear Letter of Intent dated 12/31/17). All parties remain in general agreement with the sale of the plant equipment.
